1.0 Introduction

1.1 Purpose

Right now, the Dairy Farm Management System is still just an HTML page. The farm details, livestock, production of milk and ghee are written directly in the markup, so to update the code needs to be opened. This document states how it is going to be replaced with an actual system.

1.2 Scope

The scope of this application covers the following sections:

- Farm Information
- Livestock Records
- Milk Production
- Ghee Production
- Contact Us
- User Dashboard (planned)

1.3 Stack Description

Here's what the sight will be built on:

- **Frontend:** HTML, CSS, JavaScript
- **Backend:** Node.js or PHP
- **Database:** MySQL

2.0 Overall Description

2.1 Requirement

The system should give basic details — farm details, livestock population, production history — to the user as well as giving the manager a way to edit the information in the application.

2.2 Module Description

The module description is as follows:

- **Farm Information:** Name of the farm, name of the owner and location of the farm.
- **Livestock Record:** Population of cows, buffaloes and other cattle.
- **Milk Production:** Milk produced by the farm daily.
- **Ghee Production:** Ghee produced by the farm daily.
- **Contact Us:** Phone Number and Email.
- **Dashboard:** For the managers to edit the information in the application.

2.3 Sub-Modules Description

- **Login Page:** Allows the manager and authorized personnel to edit the records.
- **Data Entry Form:** Allows the manager to enter the production details of the farm.
- **Record Editing:** Allows the manager to edit the details present in the application.

3.0 Functional Requirements

3.1 Software Requirements

HTML, CSS and JavaScript will be used to develop the front end, while Node.js with Express or PHP will be used to develop the backend and MySQL will be used create the database to hold records of the farm. Besides that any modern browser can run site easily.

3.2 Hardware Requirements

This is a small size application which has low traffic, so the requirements to host the applications is very low. A low-tier cloud instance with roughly 1GB RAM and some GB of storage so be capable to run the server. For development purposes, a basic should be sufficient and there should be continuous internet connection to develop the application and access it.

3.3 User Requirements

Any user who uses the application should be able to access the records of the farm easily, so unlike the owner of the application, there are no requirements expected from the user.

4.0 Table Description (Database Schema)

The following tables shows what kind of data each module deals, and who is expected to access it.

Module	Sub-Module	Description	User Type
Farm Information	—	Name of the farm, name of the owner and location of the farm.	Visitor
Livestock Record	—	Population of cows, buffaloes and other cattle.	Visitor
Milk Production	—	Milk produced by the farm daily.	Visitor
Ghee Production	—	Ghee produced by the farm daily.	Visitor
Contact Us	—	Phone Number and Email.	Visitor
Dashboard	Login/Signup	Allows the manager and authorized personnel to edit the records.	Farm Owner
Dashboard	Data Entry	Allows the manager to enter the production details of the farm.	Farm Owner
Dashboard	Livestock Update	Allows the manager to edit the details present in the application.	Farm Owner

5.0 Data Flow Diagram

The following diagram shows how the system will work once the login, data-entry and the database are built.
